

Google Innovations Enterprise SEARCH!

Spend Less Time *Searching* and More Time *Producing!*

Middle managers spend more than 25% of their time searching for information necessary to do their jobs. And what they often find - is not what they were looking for!

The new Google features for Business:

- ***Simplicity:*** Universal search capabilities spanning across your organization's web servers, portals, file shares, databases, real-time business data, and enterprise content systems
- ***Personalization:*** Search results based on department or function, advanced biasing based on metadata, and the ability to set email alerts for topics and documents of interest
- ***Security and Language:*** Native support for Kerberos, providing single authentication for SharePoint, file shares and non-Windows-based content systems, in addition to Windows-based systems; expanded international support for administrative functions, contextual spell checking and contextual query expansion

Webinar

**December 9th, 2008
1:00pm-2:00pm**
